

Leading Self-Service Integration Platform

IConduct - a zero-coding generic interface generator platform - enables its users to easily and elegantly configure intricate integration interfaces and automate business processes in any cross-platform hybrid environment, between any system and any other system.

The IConduct platform shifts the focus from the barriers of technical know-how to the actual design of the business data flow needs. This approach of focusing on the business flow offers dramatic savings in integration overheads by comparison with coding and other platform solutions. **IConduct displays the best time to value and Total Cost of Ownership of any business flow setup, and is known to answer business needs fast and in full.**

IConduct's expertise and abilities in the utilization of business application API/WS, as well as other data sources such as DBs and files, is absolute. Countless organizations are extracting optimal values on a daily basis, using IConduct's extremely efficient UI/UX to sync data between any given end-points, achieving quick win on even the most complex flows, where others have tried and failed, and rapidly driving high and valid values to our clients.

Among our clients are major and globally successful organizations, such as Outbrain, SimilarWeb, CyberArk, Cellebrite, CheckMarx, MakerBot, (Stratasys), Zerto, Varonis, MSC Shipping, Adama (formerly Makhteshim-Agan), Netafim, Caesar Stone, Tel-Aviv University, Mellanox, Omrix Biopharmaceuticals (JNJ), Kenshoo, Attunity, Valnes, Mazor Robotics, Allot Communications, Kornit Digital, Pointer, and many others.

As a single focal point for all organizational integration, IConduct includes an extensive control and monitoring module, allowing smart error handling, 360° dashboard on all integration processes, easy configuration of If-This-Then-That complex flows, reducing IT overheads by sending warnings to the relevant units, and more.

COMPREHENSIVE SOLUTIONS

SELF SERVICE

IConduct has a massive installation base of complex and mission-critical processes for numerous applications, in a range of business verticals. With a large-scale footprint in Cyber Security vertical, high-tech, and manufacturing companies, IConduct is the right choice.

Using IConduct's superior technological abilities, state of the art integration system architecture, full in-memory integration engine, and focus-on-the-business approach makes it possible to achieve much more, much faster, more stable, and with less effort.

IConduct stands out ahead of its competition due to several key factors:

SECURE

Performance - Data transfer is done solely on RAM. Our full in-memory integration engine displays the highest standards of performance and stability in data-crunching volume and speed. Using our cloud-based platform eliminates the client's memory footprint, as all aspects of integration are done on our data center.

Highly secured process - achieved since the transferred data lives only in the RAM, and only during the transaction time. Added to this is the expert architecture for a hybrid environment to support all Cloud to/ from On-Premise data transfer, without the need to change your local network security configuration.

ZERO CODING

Zero-coding integration platform - Drag&Drop, Pick&Config friendly web UI to implement any complex integration flow and business logic manipulation with zero coding, thus eliminating the need for Web Services and development efforts on integrated end-points. All aspects of work are carried out solely on your browser, enabling IConduct's extensive logic library to be harnessed to perform any manipulation, validation, conversion or calculation on transferred data as part of the integration process.

HYBRID

Interface both cloud and on-premise end-points using a single focal point. IConduct's full hybrid solution allows you to choose deployment either by SaaS or to your on-premise infrastructure. Identical in design and abilities, either of our deployments enables you to interface your cloud and on-premise systems on its own, in a secured manner.

OOTB abilities for full interface with more than 140 different data systems in any business aspect. ERP, CRM, DWH-BI, manufacturing, engineering, billing, service, HR, finance, IoT, identity management, legacy systems, LMS, B2B, B2C, e-commerce, marketing, social, and much more.

FLEXIBILITY

Ability to manage IConduct user's roles per process, giving additional internal security aspect. Encapsulate or display processes for users on a need-to-know basis. Manage users per process for update, delete, view and execute.

Different end points, same tricks - IConduct reflects the internal schema of each integrated system with the same look and feel, allowing minimal effort for interface configuration, and an extremely fast learning curve.

Self-Service Integration - easily take full ownership of your integration processes. IConduct manages all technical aspects of communication and data transfer for you, behind the scenes, while reflecting the end-point internal schema to the user, including customized parts, in a unified structure of entities and fields.

IConduct has been chosen time after time as best of breed by leading companies, in a vast range of verticals, as the integration platform that will march their organization forward into the upcoming challenges.
